***Allowable Subject Matter***

1. Claims 1-8, 32-40 and 49-60 are allowed.

***Reasons for Allowance***

2. The following is an examiner's statement of reasons for allowance:

The prior art taken singly or in combination does not teach or suggest, a graphics processor, among other things, comprising a graphics command storing section includes a first data storing means and second data storing means having a check address, reads out graphics command from selected one of the first and second storing means in a predetermined address order; and when an address of a graphics command being read out matches a predetermined check address, the graphics processor compares the priority of storing a graphics command to the first data storing means with the priority of the data transfer operation (claims 1, 34, and 49); and a processing amount estimating section, wherein when the estimated data processing amount of the processing amount estimating section exceeds a predetermined amount, the bus control section increases a priority of the graphics command supply operation from the memory to the display data generation section (claim 59).

The closest prior art, Shimomura et al. (U.S. Patent No. 6,600,492) teach a receiving unit, a transferring unit, a display data generation section, a bus control section to arbitrate accessing the memory between components of the graphics processor based on priority levels, to receive estimated time to fill up an internal buffer and judging the priority to use the bus, and an image display section.

However, reference Shimomura et al. does not teach the above-mentioned feature.

***Conclusion***
